

Second week (14-20 May 2012)

The main activities during the second week involved field study and community project. On Tuesday (15 May 2012), We were taken to visit two hospitals: Sanglah and Surya Husada Hospitals. While the former hospital is a public hospital, the latter is private. Both hospitals offer us more understanding about healthcare system in Bali.

Regarding community project, we were taken to visit STIKES students, Diploma of Nursing. They worked in Kerambitan Village and implemented a community project as a part of community nursing subject. We had some chances to observe healthcare services provided by the students, including health education, physical examination, group exercise, etc.

We gained more knowledge about community nursing practices as well as Balinese culture.

Thanks to STIKES for the provision of good experience of community project.
